

accurate, high-quality, reliable testing results

a partner who knows the acre and its history like no other

decisions based on custom recs and resources to back them

local access to expertise plus new tech and data innovation

grid or zone options to convert more opportunities into bushels

The goal? Increase output for every unit of input on every acre. Period.

Soil testing and nutrient prescriptions are fundamental to your decision-making, and you know not all programs are the same. Trust in the local agronomic experts committed to bringing you a higher caliber, professionally executed program. We invite you to partner with Ceres Solutions to make **CORE** Agronomics your strategy to build cropping success.

With **CORE**, farmers can expect to build success on a very sound agronomic foundation, with the full support necessary to invest more wisely. How?

Years ago, your local Ceres Solutions team made the decision to commit to the most **disciplined approach to the entire sampling process**. It's just who we are. The result? Consistently more accurate, high-quality, reliable testing results for farmers. Upon that foundation, we build your success.

Our team has been honored that farmers have trusted us year-over-year to study your management practices, document past recommendations and build a **customized nutrient program** very specifically designed to produce better results on every acre. That's our **CORE** strategy. Let's make it yours.

CLIMATE FIELDVIEW

Powered by Ceres Solutions, with AgWorld and Climate Fieldview support technologies.

**Better control means better information.
Better information means more effective solutions. Prescribed. On every acre.**

It all starts with intensive 2.5-acre sampling. This allows better assessment of variability in the field, and also allows repeatable sampling for long-term tracking. **Grid** sampling ensures the entire field is represented... ideal for new fields or fields that haven't been sampled in recent years.

Customized **zone** sampling involves the same number of pulls as grid sampling... but units are identified based on different soil characteristics across a field. Maps define different soil productivity areas within a field, and more issues can be addressed as they occur within different zones.

Either way, Ceres Solutions insists on in-house control. We use trained samplers operating automated sampling devices to ensure consistent depth with every probe. Each sample consists of eight 8-inch cores, and each one is analyzed at SureTech Labs, the most experienced and recognized certified program available to us today.

Together, let's achieve your most accurate soil testing results and gain immediate advantages over lesser programs, both in sample quality and reliability.

Once armed with your results, your Ceres team joins you to interpret nutrient status and evaluate your options. Timely customized prescriptions are created with speed and flexibility. Adaptation and familiarity with your operation are essential; let's customize acre-by-acre until your cost, yield and profitability markers are achieved.

To support Ceres Solutions Agronomic expertise, the latest complementary technology, crop health, stewardship and data innovation tools are incorporated into your basic service as a la cart options on **CORE** acres.

Let's integrate and implement today's most innovative solutions for you as part of **your CORE strategy**.

learn more about core

With **CORE Agronomics**, farmers create consistent opportunities for cropping success. Ceres Solutions' program bedrock is expert soil testing and analysis. Upon that foundational data, Ceres Solutions' Agronomy Team builds customized nutrient recommendations. Now is the time to visit with your local Agronomy Team about your goals. Our core strategy? To increase your output for every unit of input on every acre. Let's get to work.
